AWS-certified cloud engineer with an MSc in Computer Science. At Cognizant, cut CI regression runtime by 74% and production defect escapes by 38% by automating quality gates and parallelising tests on Kubernetes. Since then, designed and shipped four AWS and Kubernetes systems end to end, all infrastructure as code, automated delivery, monitoring and least-privilege security built in. Looking to bring that to a cloud, DevOps or platform team.

EDUCATION

University of Liverpool <i>MSc Computer Science (2:1); modules in Cloud Security, Distributed Systems, Machine Learning</i>	Sep 2024 – Sep 2025 <i>Liverpool, UK</i>
Narula Institute of Technology <i>BTech Electronics & Instrumentation Engineering (83%)</i>	2018 – 2022 <i>India</i>
AWS Certified Solutions Architect – Associate <i>Amazon Web Services</i>	

EXPERIENCE

Quality Engineering & Automation Analyst <i>Cognizant Technology Solutions</i>	Jan 2022 – Dec 2022 <i>Kolkata, India</i>
– Cut regression runtime from 3.5 hours to 55 minutes (74%) by parallelising test execution across a Kubernetes environment and re-tuning the Jenkins agent pool, which let the programme release more often. – Reduced production defect escapes by 38% by wiring automated quality gates and code-coverage thresholds into Jenkins on every commit. – Held on-time release delivery at 98% across a large Agile programme by owning defect prioritisation, incident triage and root-cause analysis for pipeline and environment failures. – Built a shared Java utility library that six sub-teams adopted, roughly halving their script-development time; centralised the SQL test-data repository (200+ cases) and removed 43% of data-related failures.	

PROJECTS

Independent engineering, Jan 2023 – Aug 2024. Source, architecture notes and READMEs on GitHub.

AI Document Analyser <i>S3, EventBridge, SQS, Lambda, Textract, Comprehend, Bedrock, Cognito, DynamoDB</i>	GitHub
– Event-driven pipeline in which every processing stage retries independently and unprocessable files land in a dead-letter queue, so nothing fails silently. – Comprehend redacts PII before anything is stored; Cognito JWT gates the API and attribute-based tags on DynamoDB decide who can see which document. Infrastructure in AWS CDK, deployed through GitHub Actions with no manual steps.	
Multi-AZ VPC with ALB and Auto Scaling <i>VPC, ALB, Auto Scaling, CloudWatch, Terraform</i>	GitHub
– Two-AZ VPC with public and private subnets, an internet-facing ALB and an Auto Scaling Group, written as reusable Terraform modules for networking, load balancing and compute. – Instances accept traffic only from the ALB security group. Moved the health check from TCP to an HTTP check on the app path after a port-level check kept marking a broken app healthy; NAT Gateway off by default to stay free-tier conscious.	
GitOps Kubernetes Platform <i>Terraform, Kubernetes, ArgoCD, Helm, Prometheus, Grafana</i>	GitHub
– Multi-node cluster provisioned with Terraform; ArgoCD keeps the cluster reconciled to Git, so every change goes through a pull request and rollback is a revert. – Namespace-scoped RBAC and network policies; Prometheus and Grafana alert on deployment and resource anomalies.	
Serverless Task Manager <i>Lambda, API Gateway, DynamoDB, Terraform, GitHub Actions, CloudWatch</i>	GitHub
– REST API on Lambda and API Gateway with a separately scoped least-privilege IAM role per function; GitHub Actions runs build, test and deploy, and CloudWatch alarms on 5xx and latency.	

TECHNICAL SKILLS

Cloud: AWS (EC2, Lambda, API Gateway, ALB, Auto Scaling, S3, DynamoDB, VPC, IAM, CloudWatch, EventBridge, SQS), Terraform, AWS CDK
Containers & Delivery: Docker, Kubernetes (EKS), Helm, ArgoCD, GitHub Actions, Jenkins, GitOps
Languages: Python, Bash, SQL, Java, Node.js
Networking & Security: VPC design, subnets, routing, security groups, DNS/Route 53, TCP/IP, least-privilege IAM, Kubernetes RBAC, Cognito (JWT/OAuth2), TLS, encryption at rest
Observability & Practice: CloudWatch, Prometheus, Grafana, alerting, incident triage, root-cause analysis, Linux, Agile
AI on AWS: Bedrock, Comprehend, Textract

ADDITIONAL EXPERIENCE

Retail Trainee Manager (promoted from Technical Operations Assistant) <i>Sainsbury's</i>	Jul 2025 – Present <i>Liverpool, UK</i>
– Promoted onto the structured Retail Trainee Manager Programme after four months. Previously handled first-line operational faults across checkout, fulfilment and stock systems and logged recurring issues through ticketing to cut repeat incidents.	

Right to work in the UK (Graduate visa)
